Chemical Handling Procedure

1. Preparation and storage

Read the safety data sheet before handling any chemical.

Required PPE includes chemical goggles, nitrile gloves, and a face shield.

Store chemicals in labeled containers with GHS labels.

Keep incompatible chemicals in separate cabinets.

2. Spill response

For a small spill, evacuate the area and ventilate it.

Contain the spill with absorbent material and place it in a labeled waste container.

For a large spill, call emergency services and do not attempt cleanup.

Report every spill to the supervisor.

3. Exposure, training, and waste

Use the eyewash station for at least 15 minutes after eye contact.

Train employees on chemical handling every year.

Dispose of chemical waste through the approved hazardous waste vendor.

Keep the SDS accessible for every chemical in the work area.
