Steam Boiler B-90 Operation Manual

1. Boiler specifications

The B-90 steam boiler has a maximum working pressure of 10 bar.

The maximum steam temperature is 180 °C.

The water capacity is 2000 liters.

The burner uses natural gas.

2. Operation and inspection

Perform a bottom blowdown every day.

Test the safety valve every week.

Test the low-water cutoff every month.

Have the boiler inspected annually by an authorized inspector.

3. Safety devices and records

A low-water condition trips the burner and opens the alarm.

A flame failure locks out the burner; investigate before resetting.

For an emergency shutdown, close the main gas valve and press the emergency stop.

Keep the boiler log for three years.
